

NATIONAL AIDS/STI CONTROL PROGRAMME

2017
ANNUAL REPORT

NATIONAL AIDS/STI CONTROL PROGRAMME

TABLE OF CONTENTS

Lists of Abbreviations

Executive Summary

- 1.0 Introduction
- 1.1 Brief History of NACP
- 2.0 The Package of Interventions to Reduce HIV Transmission
 - 2.1 HIV Testing and Counselling
 - 2.2 Prevention of Mother-To-Child Transmission
 - 2.3 Condom Promotion and Distribution
 - 2.4 Blood Safety
 - 2.5 HIV Exposure Prevention in the Health Care and other Settings
- 3.0 The Delivery of the Package of Care and Support Services for PLHIV
 - 3.1 Management of Opportunistic Infections
 - 3.2 Antiretroviral Therapy
 - 3.3 New Initiatives under Care and Support
- 4.0 Laboratory Systems Strengthening
 - 4.1 Proficiency Testing (PT) Programmes
 - 4.2 Basic Laboratory Information System (BLIS)
 - 4.3 Site Improvement Monitoring System
- 5.0 The Delivery of Strategic Information on HIV and AIDS
 - 5.1 Publications and Reprinting
 - 5.2 HIV Sentinel Surveillance
 - 5.3 Sexually Transmitted Infection Surveillance
- 6.0 Provision of Essential Technical Support to All MDAs in the Implementation of their Programmes
- 7.0 Financial Information
- 8.0 Administration
 - 8.1 Human Resource
 - 8.2 Vehicles
 - 8.3 Programme Management
- 9.0 Monitoring and Training
- 10.0 Challenges
- 11.0 Way Forward
- 12.0 Conclusion

Appendices

1. List of Health Facilities
2. List of Laboratories offering HIV Services, 2017
3. List of NACP Staff as at December 2017
4. Summary of Key Service Indicators

List of Abbreviations

ABC	Abacavir	HIVDR	HIV Drug Resistance
ACE	Adverse Clinical Event	HSS	HIV Sentinel Surveillance
AIDS	Acquired Immune Deficiency Syndrome	ICD	Institutional Care Division
ART	Antiretroviral Therapy	IDSR	Integrated Diseases Surveillance and Response
ARV	Antiretroviral	IEC	Information, Education and Communication
AZT	Zidovudine	IMAI	Integrated Management of Adult and Adolescent Illnesses
AZT/3TC	Zidovudine/Lamivudine combination drug	IMCI	Integrated Management of Childhood Illnesses
BSS	Behavioural Surveillance Survey	JICA	Japan International Co-operation Agency
BD	Becton Dickinson	LPV/r	Lopinavir boosted with Ritonavir
CBO	Community Based Organisation	MDA	Ministries Departments and Agencies
CCM	Country Coordinating Mechanism	MOH	Ministry of Health
CME	Continuous Medical Education	NACP	National AIDS/STI Control Programme
CPD	Continuous Professional Development	NHARCON	National HIV/AIDS Research Conference
CHAG	Christian Health Association of Ghana	NMIMR	Noguchi Memorial Institute for Medical Research
DBS	Dried Blood Sample	NVP	Nevirapine
DfID	Department for International Development	OIs	Opportunistic Infections
DMoC	Differentiated Models of Care	PCR	Polymerase Chain Reaction
DNA	Deoxyribonucleic Acid	PH	Public Health
DSD	Differentiated Service Delivery	PI	Protease Inhibitors
EFV	Efavirenz	PLHIV	Persons Living with HIV
EID	Early Infant Diagnosis	PMTCT	Prevention of Mother-To-Child Transmission
EPP	Estimation and Projection Package	PU	Procurement Unit
EMTCT	Elimination of Mother-to-Child Transmission	STI	Sexually Transmitted Infections
EWI	Early Warning Indicators	TB	Tuberculosis
FHI	Family Health International	TWG	Technical Working Group
GFATM Malaria	Global Fund to fight AIDS, TB & Malaria	UNICEF	United Nations Children's Fund
GHS	Ghana Health Service	USAID	United States Agency for International Development
GIPA	Greater Involvement of Persons Living with HIV and AIDS	WHO	World Health Organization
HAART	Highly Active Antiretroviral Therapy	WHO/AFRO	World Health Organization Africa Regional Office
HIV	Human Immunodeficiency Virus		
HTC	HIV Testing and Counselling		

Executive Summary

In 2017, HIV prevalence was 2.1% as against that of 2.4% in 2016 and 1.8% in 2015 amongst pregnant women attending Antenatal Care. (2017 HIV Sentinel Survey Report, May 2018)

A total of one million, two hundred and seventy-one thousand, three hundred and forty-seven **(1,271,347)** out of a targeted two million, six hundred and thirty-five thousand, and forty-nine persons **(2,635,049)** were tested for HIV; giving a coverage of 48%. Approximately 14% were males (179,667), 21% were non-pregnant women, and the remaining 65% were pregnant women.

Three thousand, seven hundred and fifty (3,750) sites were providing PMTCT services by the end of 2017.

Out of a targeted 1,158,263 pregnant women, eight hundred and twenty thousand, one hundred and ninety-one (820,191) were tested and counselled for HIV and also received their results. This represents 71% coverage of expected (1,158,263) pregnancies for the year. Fifteen thousand, eight hundred and twenty-nine (15,829) out of the 820,191 were HIV positive (1.9%), and 10,568 (67% of positives) were provided ARVs to Prevent Mother-To-Child Transmission of HIV (PMTCT).

About 51% of the 15,829 expected HIV Exposed Infants (HEI) received Early Infant Diagnosis (EID). Eight percent (8%) of the 8,082 HEIs were positive (643).

Twenty-six thousand, nine hundred and sixty-nine **(26,969)** adults and children were initiated on ART in 2017 comprising 7,502 males and 19,467 females in 375 ART sites. The ART initiation target for the year was **26,000** and the total number of clients on ART was 125,667. Out of the 375 ART sites, 330 currently report in DHIMS. The number currently on treatment is being validated by PPMED to account for loss to follow-up.

Currently, the estimated HIV population in Ghana is approximately **313,000** (EPP Spectrum Estimates 2017). The estimated ART coverage is therefore 45%.

During the year, NACP organized trainings for health care workers in HIV Testing and Counseling, PMTCT/EID & DBS, ART, LMIS in all ten regions as part of the plan to improve access to HIV services.

TB/HIV COLLABORATION

The TB/HIV Collaboration continued, and in 2017, the number of PLHIV who were screened for TB symptoms was ninety-one thousand, one hundred and seventy-seven (91,177) as against that of seventy-four thousand, two hundred and twenty-six (74,226) in 2016. There were one thousand, four hundred (1,400) HIV Positive Clients with TB on ART. Sixty-two DOTS corners were assessed to offer ART in Brong Ahafo, Central, Northern, Upper East, Upper West and Volta Regions. Out of the 62 DOTS sites assessed, 46 qualified for training to offer ART.

Under the Cooperative Agreement between the Ghana Health Service and the United States Centers for Disease Control and Prevention (CDC), the Programme procured two blood chemistry and two haematology analysers, 12 heavy duty UPS (8kVA), ten heavy duty stabilisers (10kVA).

The National AIDS/STI Control Programme would sustain collaboration with other Divisions and Programmes, i.e. the NTP, FHD, and PPME to ensure more integrated service delivery.

The programme is appreciative of all the support from the DG-GHS, Director PHD, MOH, GAC, Development Partners, other government & non-governmental stakeholders, service providers and the association of PLHIV. Our focus is to work together till we attain zero new infections, deaths, stigma and discrimination.

Dr. Stephen Ayisi Addo
Programme Manager

1.0 Introduction

The National AIDS/STI Control Programme (NACP) is a programme in the Disease Control and Prevention Department of the Public Health Division of the Ghana Health Service (GHS). NACP is mandated to coordinate and implement HIV and AIDS-related activities of the Ghana Health Sector Strategic Framework.

1.1 Brief History of NACP

The National AIDS and STI Control Programme started as a National Technical Committee on AIDS later became National Advisory Council on HIV and AIDS in 1985 and National AIDS/STI Control Programme (NACP) in 1987. NACP has since been the lead agency in the health sector's response to HIV and AIDS in Ghana.

NACP is responsible for implementing the health sector aspects of the National HIV and AIDS Strategic Plan (NSP 2016-2020). This NSP is designed to fast-track the country's efforts towards ending AIDS by 2030.

The National AIDS/STI Control Programme is empowered to carry out the following activities:

- The delivery of a package of interventions to reduce HIV transmission.
- Provision of care and support services for Persons Living with HIV (PLHIV).
- The delivery of Strategic Information on HIV and AIDS and other STIs.

- The provision of essential technical support to all Ministries, Departments, and Agencies (MDAs) in the implementation of their HIV programmes.

The 2017 Annual Report gives us a summary of activities and projects that were undertaken in the year. The areas can be considered under the following broad performance themes.

- HIV Testing Services (Including Behaviour Change Communication, Condom promotion, and Information, Education, and Communication)
- Elimination of Mother-To-Child Transmission (EMTCT) services
- Antiretroviral Therapy
- Sexually Transmitted Infections Management
- Opportunistic Infections Management
- Blood safety and Laboratory Quality Assurance
- Activities undertaken under the Cooperative Agreement (CoAG) between GHS/NACP and CDC.

2.0 The Package Of Interventions to Reduce HIV Transmission

One of the core tasks for NACP is to reduce new HIV infections. Various interventions were undertaken to prevent the spread of new infections. These include the provision of HIV Testing and Counselling (HTC) as well as the Prevention of Mother-To-Child Transmission (PMTCT) of HIV services.

Activities undertaken to reduce HIV transmission in 2017 included the following:

- HIV Testing and Counselling
- Prevention of Mother-To-Child Transmission of HIV
- Sexually Transmitted Infection Management
- Condom Promotion and Distribution
- Blood Safety
- Advocacy, Communication and Social Mobilization for Demand Creation

2.1 HIV Testing and Counselling

In 2017, the Programme routinely offered HIV Testing and Counselling (HTC) services to persons who wanted

to know their status and also learn more about HIV and AIDS to make informed decisions about their sexual and reproductive health. HTC serves as the entry point to antiretroviral treatment and helps to prevent new infections and re-infection in the general population.

One Million, Two Hundred and Seventy-One Thousand, Three Hundred and Forty-Seven (**1,271,347**) out of a target of two million, six hundred and thirty-five thousand, and forty-nine persons (**2,635,049**) were tested for HIV in 2017, representing 48% of the expected HTC services target for the year. The HIV prevalence among HTC clients was 4.7% as compared to 5.5% in 2016 and 4.8% in 2015. Tables 2.1 to 2.3 show persons tested and counselled for HIV in 2017 segregated into male-female-and pregnant females, child and adult, while Table 2.4 gives the regional testing coverage. Table 2.5 shows the trend among persons tested and counselled from 2015 to 2017.

Table 2.1: Total Number of Persons Tested and Counsellled for HIV in 2017

Region	Men	Pregnant Women	Non-Pregnant Women	Total

Percentage positive	10.4	4.1	4.8	9.1	4.9	5.5	8.0	4.1	4.7

2.2 Prevention of Mother-To-Child Transmission (PMTCT)

In 2017, 3,750 health facilities provided PMTCT of HIV services. Provision of PMTCT services has many approaches, and Ghana's four-pronged approach to providing the package of interventions is to reduce the risk of MTCT of HIV till the elimination target of less than 5% transmission rate from mother-to-child is achieved. The various activities undertaken in the year 2017 under the four prongs were as follows:

2.2.1 Prong One: Primary Prevention

All Service delivery points encouraged pregnant women to know their HIV status to reduce the risk of transmission of the virus from mother to baby. This critical component

of Prevention of Mother-To-Child Transmission service delivery and acts as the entry point of care for mothers. HIV testing and counselling services were provided at all PMTCT Centres.

In 2017, 820,191 pregnant women out of 1,158,263 targeted pregnancies got to know their HIV serostatus representing 71% of target. Post-test and continuous counselling were offered to all clients to highlight the need to avoid HIV infection.

According to Ghana's PMTCT protocol, all pregnant women who test negative initially should be retested at 34 weeks. This is to ensure that those who become infected after the initial testing are diagnosed.

HIV positive pregnant women in the regions are depicted in Table 2.4 above. In 2017, Eight hundred and twenty

thousand, one hundred and ninety-one (**820,191**) pregnant women were tested and fifteen thousand, eight hundred and twenty-nine (**15,829**) were found to be HIV positive (**1.9%**). Three Thousand one hundred

and seventy-three (**3,173**) pregnant women were found to be HIV positive at retesting which represents 0.4% of pregnant women tested (820,191).

Table 2.6: Percentage of Regional HIV Positive Pregnant Women

Region	Pregnant Women Tested Per Region	No. Tested Positive at Initial Screening	Tested Positive @ 34 weeks	Total Positive	Percentage Positive
Ashanti	141,237	2,277	442	2,719	2%
Brong Ahafo	84,693	1,688	112	1,800	2%
Central	73,706	1,026	438	1,464	2%
Eastern	79,452	1,698	392	2,090	3%
Greater Accra	136,901	2,401	555	2,956	2%
Northern	102,211	815	785	1,600	2%
Upper East	36,505	225	28	253	1%
Upper West	24,708	195	191	386	2%
Volta	65,486	816	72	888	1%
Western	75,292	1,515	158	1,673	2%
Total	820,191	12,656	3,173	15,829	1.9%

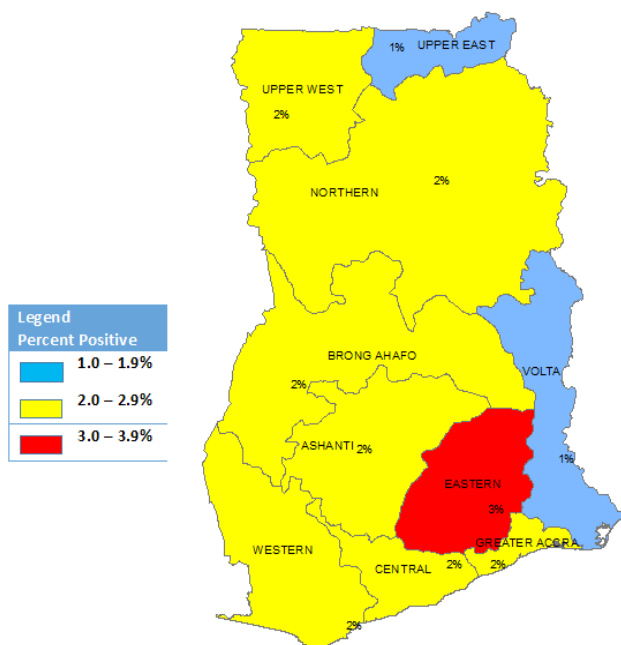

Fig 2.2: Percentage of Pregnant Women who tested positive in 2017

2.2.2 Prong Two: Preventing Unintended Pregnancies

The NACP liaised with Family Health Division of the Ghana Health Service and provided Family planning (FP)

services as part of ANC at all service delivery points. Women seeking PMTCT services also got Family Planning services and were catered for or linked to services where necessary during the ante-natal and post-natal periods. HIV positive non-pregnant women were also referred for Family Planning services. The Family Health Division has

a detailed data on provision of Family Planning from the Reproductive and Child Health Unit (RCH) of the Family Health Division (FHD) of the Ghana Health Service.

2.2.3 Prong Three: Provision of PMTCT Interventions

Ghana adopted the policy of using combination antiretroviral therapy for PMTCT in 2006 and updated its protocol in 2010 to lifelong triple ARVs for HIV positive pregnant women to further reduce Mother-to-Child Transmission (MTCT) rates.

Out of the 15,829 pregnant women who tested HIV positive in 2017, ten thousand, five hundred and sixty-eight (67%) received ART.

Imperatively, all those who tested negative were retested at 34 weeks to identify anybody who had become infected within the intervening period. Three thousand, one hundred and seventy-three (3,173) pregnant women were found to be HIV positive during retesting. The overall HIV prevalence among pregnant women per service data is 1.9%.

The regional distribution of facilities providing PMTCT is as shown in Table 2.7 and confirms gaps in all regions. Northern Region had the highest coverage of facilities providing PMTCT services at 86%, and the Ashanti Region had the lowest (62%). The average national coverage of PMTCT services is 71%. The goal of NACP is to ensure that all HIV positive pregnant women receive ART to prevent mother-to-child transmission.

Table 2.7: PMTCT Regional HIV Screening Coverage

Region	Regional Targets to be Tested by Dec. 2017	Results as at Dec. 2017	Regional Coverage (Results/Target)
Ashanti	226,479	141,237	62%
Brong Ahafo	106,955	84,693	79%
Central	106,774	73,706	69%
Eastern	120,428	79,452	66%
Greater Accra	194,443	136,901	70%
Northern	118,841	102,211	86%
Upper East	45,393	36,505	80%
Upper West	31,728	24,708	78%
Volta	99,170	65,486	66%
Western	108,053	75,292	70%
Total	1,158,263	820,191	71%

Table 2.8 shows an increasing trend in number of pregnant women tested for HIV from 2013 to 2017. The number of positive women, however, decreased by 2,287

whereas the percentage of positive women who were put on ARVs increased by 14%. A graphical trend is shown in Figure 2.2.3.

Table 2.8. Trend analysis for PMTCT uptake and the provision of ARVs from 2013 to 2017.

Indicator	2013	2014	2015	2016	2017
No of Pregnant Women Tested	492,622	601,726	694,329	702,381	820,191
# Positive	9,508	12,583	12,236	18,116	15,829

# Given ARVs	7,266	8,299	7,813	9,680	10,568
% Given ARVs	76%	66%	64%	53%	67%

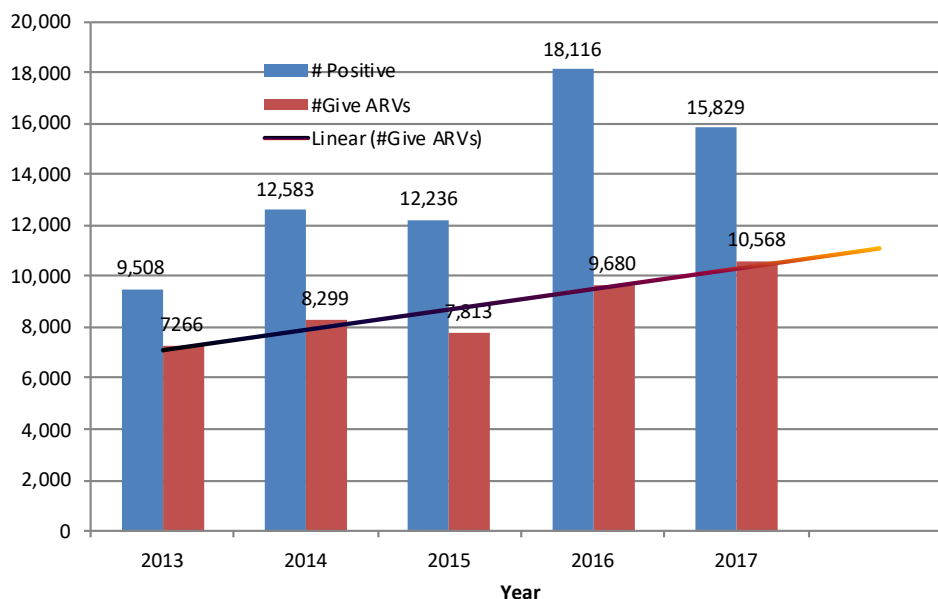

Fig 2.3: Trend in number of positive pregnant women given ARVs from 2013 to 2017

2.2.4 Prong Four: Provision of Treatment, Care and Support Services for Mothers, their Infants, and Families

Treatment, Care, and Support Services remained an integral part of the package of interventions aimed at the mothers, their infants and families through the right linkages to services. Male involvement in PMTCT through couple counselling and partner testing in some facilities

was beneficial. Gradually the intervention would be replicated in all service delivery points to enhance uptake of PMTCT at the community level.

Appropriate services such as post-natal, family planning, nutrition, and child welfare services were given to mothers and their infants at the ART centres for continued care. They were also followed up for Early Diagnosis of HIV. Table 2.9 shows a list of sites which provide HIV-related services in each region.

Table 2.9: Facilities Providing HIV Related Services

REGION	ANC PROVIDING PMTCT SERVICES	ART	HTC	EID
Ashanti	453	63	459	92
Brong Ahafo	293	40	179	57
Central	289	25	354	26
Eastern	619	33	1016	23
Greater Accra	330	52	198	49
Northern	509	54	498	54
Upper East	340	16	296	122
Upper West	181	11	196	89
Volta	347	40	262	51
Western	389	41	317	29
Total	3750	375	3775	592

2.2.5 Syphilis

Fewer pregnant women were tested for syphilis than HIV (HN 820,191), Syphilis (420,681). However, there is an improvement over the previous year. In the year under review, 420,681 pregnant women were tested for syphilis, and 91% of those found positive were treated together with their partners. Overall, syphilis screening

and treatment declined due to a stock out of Syphilis test Kits in the year under review compared to previous years.

NACP aims at ensuring that all pregnant women tested for HIV are also tested for Syphilis and everyone testing positive receives treatment. This also helps prevent congenital syphilis. Syphilis testing coverage is shown in Table 2.10 from 2015 to 2017.

Table 2.10: Pregnant women Tested for Syphilis 2015 - 2017

Indicator	2015	2016	2017
No. of Pregnant Women Tested for Syphilis	471,284	603,465	420,681
No. Positive for syphilis	12,885	13,065	12,883
No. Treated for syphilis	12,498	13,065	11,776
% Treated for syphilis	97%	100%	91%

2.2.6 Capacity Building for E-MTCT

One major challenge at the beginning of the year was the lack of human resource capacity at all levels of the health care system to provide PMTCT/EID of HIV services. The United Nations Children Fund (UNICEF) collaborated with the programme to organize HTS/PMTCT workshop for Three hundred and eighty-nine (389) Health care providers in four regions as part of activities to achieve Ghana's goal of virtually eliminating Mother to Child Transmission (MTCT) of HIV. The objectives were to

provide trainee counsellors with adequate knowledge in HTS/PMTCT to enable them to provide comprehensive PMTCT Services in different settings, discuss infant feeding in the context of HIV infection and to equip them with skills in HIV antibodies testing and sample taking for EID.

2.2.7 Early Infant Diagnosis of HIV

A total of 8,082 exposed babies out of 15,829 expected to be HIV exposed were screened for HIV in various facilities as shown in Table 2.11 below.

Table 2.11: HIV Exposed Infants Screened for HIV

No.	Facilities	Infants Screened	Infants Positive	Percentage Positive
1	AR - KATH	957	79	8.3%
2	BAR	719	38	5.3%
3	CR	301	32	10.6%
4	ER	2,005	221	11.0%
5	GAR - KBTH	1,515	153	10.1%
6	NR	121	10	8.3%
7	UER	315	19	6.0%
8	UWR	222	14	6.3%
9	VR	312	16	5.1%
10	WR	1,615	61	3.8%
	TOTALS	8,082	643	8.0%

In 2017, 8,082 of HIV Exposed Infants were screened for HIV as compared to 5,551 in 2016. Overall, 8% of the exposed babies in 2017 were found to be HIV positive compared to 12% in 2016.

2.3 Condom Promotion and Distribution

NACP distributed, through the Family Health Division of the Ghana Health Service, with the support of MoH, USAID, and UNFPA, a total of 5,354,332 condoms made up

of 5,326,515 male and 27,817 female condoms. Condom utilisation coverage within the Public Health facilities is very low due to weak distribution and promotion. Its promotion was also significantly reduced as a result of the discontinuation of active outreach testing and the 'Know Your Status (KYS) campaigns.'

2.4 Blood Safety

The risk of HIV transfusion through infected blood products exceeds that of any other risky exposure. Therefore, the

programme provided all health institutions with test kits for HIV screening to ensure that all blood and blood products for transfusion are screened for HIV antibodies among other tests. This is clearly in line with Ghana's national policy of elimination of blood transmissible HIV infection.

A total of **83,931** units of blood were screened for HIV throughout the country, and **4,307** were found to be HIV reactive, a prevalence of 5.1%. The regional distribution is as shown in Table 2.12 below.

Table 2.12: Blood Screened by Region

Regions	Units of Blood Screened in 2016	Total HIV Reactive in 2016	% HIV Reactive	Units of Blood Screened in 2017	Total HIV Reactive in 2017	% HIV Reactive
Ashanti	22,588	693	3.1	5,903	236	4.0

Total	201,765	7,314	3.6	102,131	4,307	4.2

2.5 HIV Exposure Prevention in Health Care and other Settings

In all training workshops and seminars, Universal infection prevention measures were emphasized. During monitoring and supervisory visits that the Programme organised, health care providers were constantly reminded of precautionary measures as a means of reducing exposure to HIV. Also, health facilities were encouraged to display

the protocols and contact numbers of persons capable of administering Post Exposure Prophylaxis (PEP), at visible places for ease of reference.

In 2017, a total of 1,362 persons reported Post Exposures with 15% being Rape Survivors, while the rest were due to occupational exposures. Twelve exposures were from positive sources and one client was found to be HIV positive as shown in Table 2.13.

Table 2.13: Number of Persons Provided with Post Exposure Prophylaxis

REGION	No. of Facilities with Protocol	No. of Cases Reported	RISK LEVEL				OUTCOME		
			Very Low	Low	High		Positive	Negative	Follow Up

3.0 The Delivery of the Package of Care and Support Services for PLHIV

Care and Support services are geared towards providing a package of interventions to improve the quality of health and elongate the life of PLHIV. NACP continued with the provision of ART services to enhance the quality of life of the PLHIV.

Interventions included:

- Prevention and Management of Opportunistic Infections (OIs)
- Antiretroviral Therapy
- Continuous Supportive Counselling
- Effective Home-Based Care
- Working with PLHIV and their Associations
- Greater Involvement of Persons Living with HIV and AIDS (GIPA)

Opportunistic Infections (OIs) occur when the immune system is compromised due to the HIV destroying the CD4+ cells. It is important to start treating OIs before initiating a client on ART.

To prevent OIs in PLHIV, a total 22,120 of Persons were given Cotrimoxazole (Septrin) prophylaxis in 2017. The breakdown includes 20,290 adults (6,230 males and 14,060 females) and 1,803 children (921 boys and 909 girls). Table 3.1A shows the regional distribution of clients who were diagnosed with HIV but were yet to be enrolled on ART. Figure 3.1 is a pictorial representation of the same data.

3.2 Antiretroviral Therapy

Providing Antiretrovirals (ARVs) to Persons Living with HIV and AIDS remained mandatory to reduce morbidity and mortality among the infected and to prolong life. Presently, three hundred and thirty ART sites report in DHIMS out of three hundred and seventy-five (375) health

facilities that are providing ART services throughout the country. In 2017, a total of **26,969** persons were newly enrolled on treatment, (25,325 adults and 1,644 children) out of this number, 25,002 made up of 23,453 adults and 1,549 children, were retained on ART 93%. The regional contributions are as follows in Table 3.2.

Table 3.2: Number of New Clients Provided Antiretroviral Therapy

Regions	Adults		Paediatric		Total
	Male	Female	Boys	Girls

Total	16,968	20,497	26,969

3.2.1 TB and HIV Co-infection

TB is a common opportunistic infection affecting PLHIV so the policy is to screen every PLHIV for Tb at every clinic visit and screen everyone with TB for HIV. In 2017, a total of 91,177 persons on ART were screened for TB, compared to 74,226 who were screened in 2016. Again, 1,400 HIV positive persons with TB were put on antiretroviral therapy in 2017 as against 1,247 in 2016.

3.2.2 Procurement and Supply Management of Programme logistics

3.2.2.1 Training

The Programme organized a three-day training for logistics officers at ART sites. The aim was to build the capacity of health workers at all ART sites to manage logistics and report accurately and timely. A total of **1,090** Health Care workers in all ten regions were trained in 41 batches in the activity which took place from 16th November 2017 to 20th December 2017.

Participants comprised ART Pharmacists, Pharmacy Technicians, Physician Assistants, ART Nurses, Midwives, Logistics and Supply Officers, Procurement Officers,

Health Information Officers, District Public Health nurses and Data Officers.

Data collection tools, reporting formats, manuals, guidelines and job aids were shared with the participants. This activity was also aimed at obtaining timely and accurate laboratory logistics data for decision making.

3.2.2.2 Scheduled delivery of commodities to Regional Medical Stores and Teaching Hospitals

Five rounds of scheduled deliveries were undertaken in the year 2017 to improve commodity availability at Service Delivery Points (SDPs) and decongest the central warehouse to reduce warehousing cost. Also, supplementary distribution and re-distribution of commodities were done to the regional and facility levels to reduce overstocking, stock-outs and the risk of expiries at regional and facility levels.

3.2.2.3 Availability of tracer ARVs

Commodity availability at the central and regional levels are as shown below.

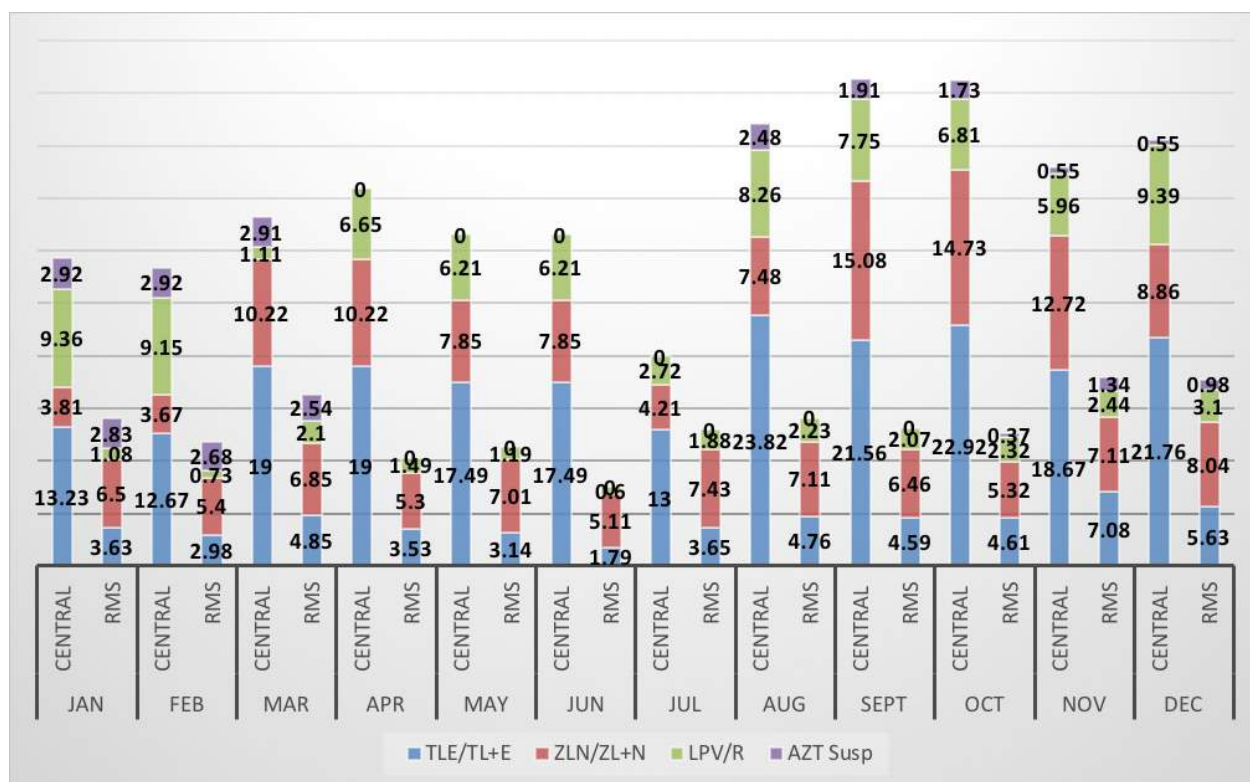

Fig 3.2.2: Availability of tracer ARVs (MoS)_2017

Legend:

TLE/TL+E

Tenofovir+Lamivudine+Efavirenz, 300mg+300mg+600mg / Lamivudine +Tenofovir, 150mg+ 300mg + Efavirenz Capsule, 600mg

ZLN/ZL+N

Lamivudine+Zidovudine+Nevirapine 150+300+200 / Zidovudine + Lamivudine Tablet, 300 mg +150 mg

AZT Susp

Zidovudine Syrup, 10 mg/ml

LPV/R

Lopinavir + Ritonavir Tablet, 200 mg +50 mg

3.2.2.4 Commodity reporting

Procurement for antiretrovirals was complemented with commodities for viral load, EID, CD4+, chemistry, and haematology testing. In 2017, a total of 4,414,712 pieces of First Response screening test kits as well as 204,333 pieces of the confirmatory Oraquick test kits, were procured for use. Some quantities of other rapid diagnostic test kits for Syphilis and Hepatitis were also procured.

The programme, working with the Global Fund will be procuring three (3) viral load platforms in 2018. This equipment is expected to support and facilitate the scale-up of viral load testing in the country. A sample referral system for the transportation of samples and results is also expected to be established in 2018 to support the scale-up further.

3.2.2.5 Quarterly logistics monitoring

A total of two (2) rounds of logistics-based monitoring visits were undertaken to ART and selected PMTCT sites in 2017. In all 221 sites were visited in the ten (10) regions.

3.2.3 HIV Drug Resistance

The National Expert Committee on HIV Drug Resistance continued to give guidance to NACP in the monitoring of HIVDR in the country.

3.3 New Initiatives under care and support

This year several new initiatives were undertaken to improve care and support services for PLHIV. These included:

- Dissemination of Task Sharing Policy
- Review of the Differentiated Models of Care Manual
- Quality improvement by the integration of HIV/TB/Malaria indicators into ANC and PNC registers.

3.3.1 Dissemination of Task Sharing Policy

Ghana adopted the global 90-90-90 aspirational targets to sustain the progress being made in the area of care for PLHIV towards ending the AIDS epidemic by 2030. Attaining these targets is however hinged on the availability of a well-trained, functional and equitably distributed health workforce. Whereas significant effort has been made in increasing the production and retention of the health workforce, there are still substantial shortages of critical staff and mal-distribution of those available. As such, task sharing which is defined as a process of enabling lay and mid-level healthcare workers to provide services safely that would otherwise be restricted to higher level cadres has been shown to be useful in many contexts including Ghana.

Task sharing has been occurring within the GHS for a while now though its implementation has not been guided by a coherent operational policy thus leaving gaps in the standardization, monitoring, and evaluation of various task sharing initiatives. An operational policy document intended to address this gap and highlight a need-based systematic approach to task sharing has been developed. It also provides a detailed and specific implementation framework for task sharing initiatives in the area of HIV and TB co-morbidities. This document which serves as a guide for future initiatives in other areas was developed and disseminated in all ten regions in collaboration with the Human Resource Division of the GHS.

3.3.2 Review of Differentiated Model of Care Manual (DMoC)

In the quest to achieve the 90-90-90 targets and ensure the new WHO treat all policy is fully implemented, current programmatic approaches have been changed. To support these, an operational manual for Differentiated Service Delivery for HIV in Ghana was developed to outline the "How" of HIV care and describe how services may be tailored to meet clients' clinical requirements. It takes into consideration specific population needs of pregnant and breastfeeding women, men, children, adolescents and key populations.

The NACP with support from the World Health Organization (WHO) held a three-day stakeholders' meeting in Greater Accra from 7th – 9th November 2017 to validate the draft DMOc manual.

3.3.3 Quality Improvement on Integration of HIV/ TB/MALARIA services into PNC and ANC Registers.

The Liverpool School of Tropical Medicine (LSTM) London in their quest to assist the GHS to improve quality of ANC/PNC services in the country collaborated with FHD, NACP, and other key stakeholders to review standards for Maternal and Neonatal Care and integration of HIV, TB

and Malaria into ANC and PNC services. This is a useful tool for facilitating a systematic approach to evaluate and improve the care provided by maternal and neonatal health services. The Centre for Maternal and Newborn Health, LSTM developed a set of standards from globally available standards of care which needed to be discussed and reviewed by the relevant government officials, professional bodies and organizations in Ghana.

FHD led the process in a four-day workshop and participants were drawn from six priority regions including Western, Brong Ahafo, Eastern, Northern, Greater Accra and Ashanti regions.

4.0 Laboratory Systems Strengthening/CDC Cooperative Agreement (COAG) Activities

The US Government under the Co-operative Agreement between the Ghana Health Service and the Centres for Disease Control and Prevention, Atlanta, provided funding for some activities which were implemented by the NACP in collaboration with the Institutional Care Division (ICD) on behalf of the Ghana Health Service. Main activities undertaken were under the following broad headings:

4.1 Proficiency Testing Programs (PT)

- Proficiency testing for viral load/EID was conducted: Eight (8) out of the nine (9) PCR sites for viral load/EID testing were involved in an external quality assurance programme out of which seven (7) scored satisfactory results.
- The Dried Tube Specimen Proficiency Testing (DTSPT) activities for Rounds four (4) and five(5) were also undertaken. For Round 4, 68% of the total testing sites (471) enrolled, performed satisfactorily. The remaining 32% of testing sites had poor results due to reasons such as non-adherence to the National HIV Testing algorithm, incorrect panel results, final test results not entered, times for rehydration and reading of test results were not adhered to, usage of expired test kits, panels not tested, name of confirmatory test kits not provided and non-availability of Oraquick test kits. Corrective action training were therefore conducted for these non-performing sites across four regions namely Ashanti, Eastern, Greater Accra and Western.
- The DTSPT programme was extended to the Brong Ahafo region where 100 selected facilities and regional/district PT administrative teams have been trained and enrolled in the programme in Round 5. Panels were prepared and distributed to all PT sites in the five priority regions including Brong Ahafo.
- The overall performance of the testing sites has improved from the 68% in Round 4 to 91% satisfactory results in Round 5; 492 (91%) sites received satisfactory ratings while 50 (9%) sites received unsatisfactory ratings. To correct unsatisfactory performances, corrective action in the form of on-site trainings were scheduled in February, 2018 for the testing sites with poor results.

4.2 Basic Laboratory Information System (BLIS)

- Pre-implementation procedures including GAP analyses, sensitisation, and training on BLIS for staff such as nurses, biomedical scientists, clinicians, HIV data officers, IT and national service personnel at the testing sites were done.
- Installation, configuration, and interfacing of BLIS with DHIMS2 was carried out. Entry of VL PCR laboratory legacy data is ongoing as well as the provision of remote technical support. However, the PCR machines are yet to be interfaced with BLIS for the viral load results.
- The total number of viral load tests conducted in 2017 was 22,511 out of which 14,212 (63%) were virally suppressed.

4.3 Site Improvement Monitoring System

Monitoring, site support, and supervision visits were undertaken for Viral Load/EID and Basic Laboratory Information Systems (BLIS). All the nine (9) PCR sites were covered in Quarter two visit for VL/EID while five (5) PCR sites were visited for BLIS. The viral load monitoring was carried out to gather situational analysis information on laboratory activities for VL/EID services and to use this information for planning improvement projects in these laboratories. Also, the visits provided additional support needed for optimal provision of testing services.

All the 9 PCR sites were visited during the period with cross-cutting key findings covering:

- Performances in the external quality assessment programmes,
- Working conditions of equipment,
- Competencies of the laboratory personnel,
- Environmental conditions of the PCR laboratories,
- Documentation

- Viral load sample referrals from facilities to testing sites as
- Results transmission from testing sites to the referring facilities
- SOPs for sample management, equipment management, safety and waste management.

retreat at Protea Hotel, Takoradi. The primary objective of this retreat was to finalise the 2016 annual report and work plan for 2017. The group used this opportunity to reflect on work done, relax, strengthen staff relations and set the agenda for the next year'.

4.4 NACP Annual Retreat

The staff of NACP and the Centres for Disease Control and Prevention (CDC), Ghana office took part in a one week

5.0 The Delivery of Strategic Information on HIV and AIDS

5.1 Publications and Reprinting

During the period, the following documents were either revised or reproduced and distributed to facilities or institutions involved in the national response to HIV and AIDS:

- Quarterly Bulletins
- Differentiated Service Delivery Operational Manual
- Update ART Guidelines
- Ghana Laboratory Viral Load Testing Expansion Plan
- 2016 HIV Sentinel Survey (HSS)
- 2016 Annual Report

5.2 HIV Sentinel Survey

HIV Sentinel Survey remains the main tool that the

Programme uses to conduct monitoring on the trend and state of the epidemic in the country at any given time. The system is based on an annual HIV Sero-Prevalence Survey conducted in Forty (40) sentinel sites using an unlinked anonymous method.

A percentage of Pregnant women accessing antenatal services for the first time and clients seeking treatment for STI during the survey period make up the sentinel population. The Survey results are the primary data for the estimation and projection of HIV infection in the general population which provides a firm basis for planning and forecasting for prevention, treatment, management and care related programmes.

The Programme successfully disseminated the results of the 2017 HSS survey. The 2017 HSS was successfully conducted in all the 40 sentinel sites, and prevalence among pregnant women was 2.1% as against 2.4% in 2016. Figure 5.1 is a map of Ghana showing the regional HIV prevalence.

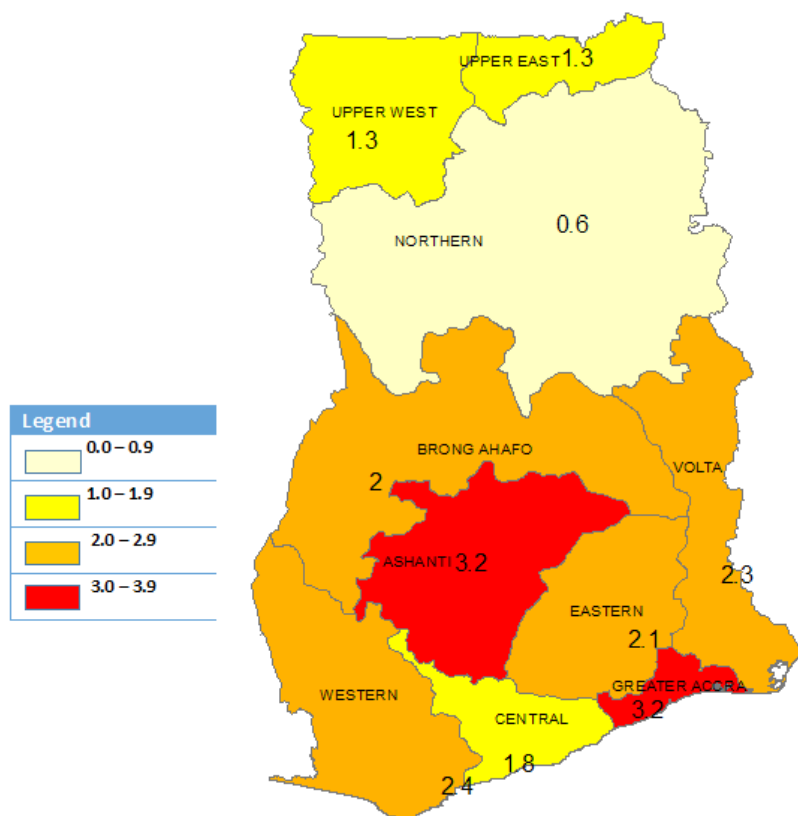

Fig. 5.1: Regional HIV Prevalence (HSS, 2017)

5.3 Sexually Transmitted Infection Surveillance

Early detection and syndromic management of Sexually Transmitted Infections (STIs) is a major public health strategy for HIV prevention.

In 2017, a total of **192,579** STI cases were diagnosed and treated in the country. These were both male and female genital ulcers, urethral discharge and vaginal discharges. The relative contributions of the various regions are shown below:

Table 5.1: STI Cases in 2017

Region	Genital Ulcer	Vaginal Discharge	Urethral Discharge	Total
Ashanti	1,692	26,581	6,160	34,433

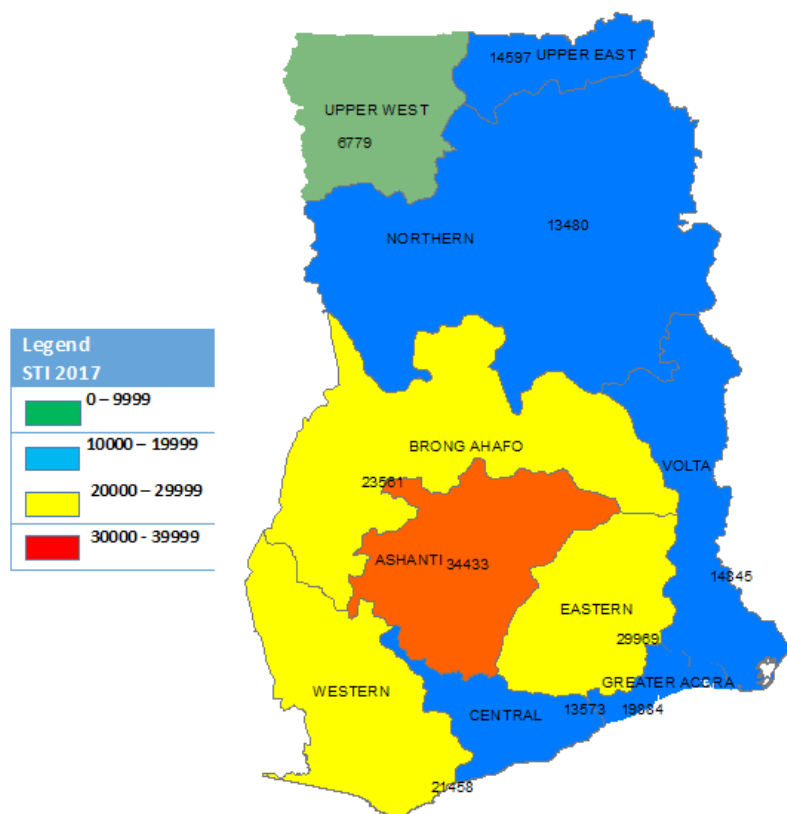

Fig 5.3: Regional Map of STI Cases In 2017

6.0 Provision of Essential Technical Support to All MDAs in the Implementation of their Programmes

The NACP continued to provide technical support to various MDAs and stakeholders in their workplace HIV and AIDS programmes.

The Programme participated fully in most activities of the Ghana AIDS Commission and the Country Coordinating Mechanism (CCM) of the Global Fund by providing technical assistance to enhance their advocacy role.

Academic institutions such as Ghana College of Physicians and Surgeons, University of Ghana School of Medicine and Dentistry, School of Nursing and School of Public Health were not left out.

7.0 Financial Information

In the year under review, from January to December 2017, the programme received a total financial support of \$24,097,867.59 from its donor partners. Most of the support was from the Global Fund with an amount of \$22,746,498.64 representing 94.4% of the total funds whilst other donors (CDC, WHO and the UNICEF) contributed \$ 1,351,368.95 representing 5.6% of total receipts.

These Funds supported the GHS/MOH in the implementation of its strategic activities such as PMTCT, ART, and HIV Testing, HIV/TB Collaboration, Health Systems Strengthening, Programme Management and M&E.

The year's total expenditure was \$40,841,365.17. A summary of the breakdown showing cumulative disbursement and expenditures as at the end of 2017 is shown below:

Table 7.1 Financial Summaries for 2017

Source of Funding	Total Grant	Cummulative Disbursement	Cummulative Expenditure	Total Disbursement		Total Expenditure	
				US	US	US	US
	2017			2016	2017	2016	2017
NFM Grant (1 July 2015 To 31 Dec 2017)							
	70,740,823.00	77,073,938.01	23,997,162.18	22,746,498.64	28,824,294.71	39,599,289.96	
Others			639,936.90	1,351,368.95	697,542.23	1,242,075.21	
Total			24,637,099.08	24,097,867.59	29,521,836.94	40,841,365.17	

7.1 Total Expenditure within 2017

In 2017, total expenditure under the various cost categories/Cost Groupings and SDAs/ Modules by the NACP. Expenditure under the NFM 1 amounted to \$39,599,289.96 while expenditure under others amounted to \$1,242,075.21.

The cost categories are as defined below:

FINANCIAL SUMMARIES FOR 2017 (ACCOUNTS)

- Human Resource**- includes all HR expenditure under the grants
- Travel Related Cost** -includes training, Supervision, surveys, data collection, meeting, advocacy related costs etc.
- External Professional services** - includes Data Quality Assessment, HIV Sentinel Survey, DHIMS activities etc
- Health Products - Pharmaceutical Products** - includes Procurement of ARVs for ART etc

- Health Products - Non-Pharmaceuticals** -includes Procurement of HIV Test kits, BD, Viral Load, Haematology and Chemistry reagents etc
- Health Products- Equipment** -includes cost of Mainteningf Laboratory equipment, CD4 and Hematology Machines etc
- Procurement and Supply-Chain Management costs (PSM)**-includes Freight and Insurance, Warehouse and Storage, distribution etc,
- Non-health equipment**- includes the procurement of Computers and Accessories for ART client Data capture and monitoring
- Communication Material and Publications** - includes the cost of printing of tools and registers, IEC materials, reports, PMTCT and HTC manuals etc
- Programme Administration costs** - includes office related costs

The total expenditure in 2017 as defined according to Cost Groupings and Modules respectively are shown in tables 7.2. & 7.3

Table 7.2 Total Expenditure by cost grouping

Cost Groupings	NFM Grant	Others	Total Expenditures
	USD	USD	USD
1.0 Human Resources (HR)	2,222,442.60	140,523.75	2,362,966.35
2.0 Travel related costs (TRC)	3,633,472.46	857,873.27	4,491,345.73

7.2 Financial Support to Regions

The programme disbursed a total amount of \$78,396.96

to all the ten regions to undertake monitoring activities at both regional and district levels, in 2017. Below is a table showing the actual amounts allocated to each region and a graphical representation of the amounts allocated.

Table 7.4 Financial Support to Regions

REGION	MONITORING USD
Ashanti Region	9,522.02
Brong Ahafo Region	9,270.73
Central Region	7,068.95
Eastern Region	9,368.22
Greater Accra Region	6,276.85
Northern Region	8,966.33
Upper East Region	5,978.29
Upper West Region	5,369.47
Volta Region	8,709.20
Western Region	7,866.90
TOTAL	78,396.96

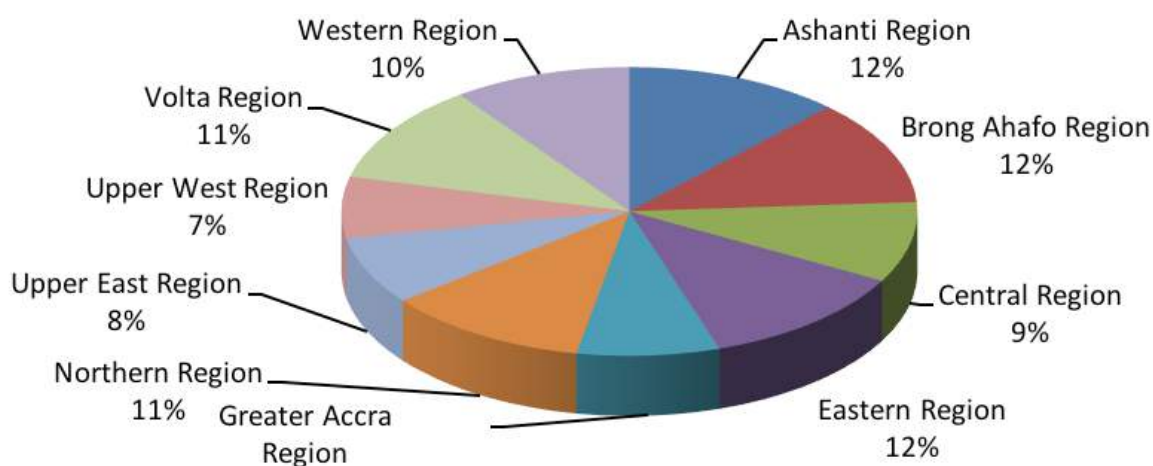

Fig: 7.4 Total Support to Regions in 2016

7.3 PEPFAR Support

The United States Government (USG) committed to providing the Ghana Programme with a total of twenty-three million, seven hundred and seventy-nine thousand, five hundred and fifty-four dollars (US\$23,779,554) for two years as one-time support for ART and related commodities for Ghana. Funding from the USG, through

the U.S President’s Emergency Plan for AIDS Relief (PEPFAR), will enable the GoG to provide services for 57,531 clients by the end of 2018.

Under the agreement, the GoG agreed to significantly scale-up domestic financing for HIV treatment and assume financial responsibility for persons enrolled and currently on treatment with PEPFAR funds by 2019.

8.0 Administration

8.1 HUMAN RESOURCE

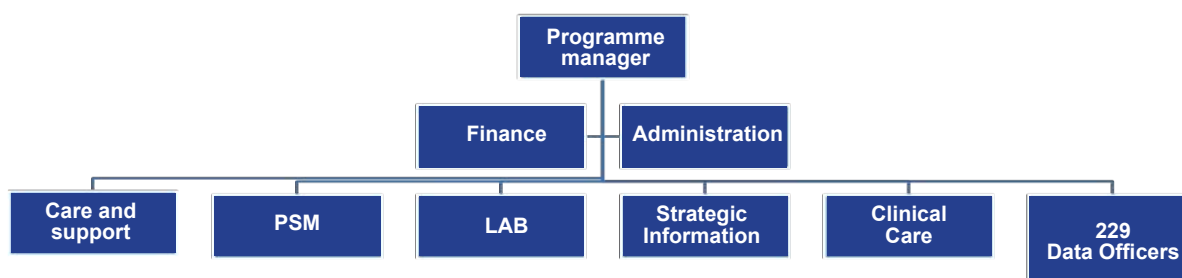

The Programme in line with its scale-up plan beefed up its staff by recruiting and transferring in five (5) more personnel to offer the necessary technical and administrative support. However, one technical staff resigned his position, and another remained on leave of absence without pay. Also, three national service persons were posted to support the Programme. Thus the current staff strength is thirty-eight (38) including the three national service personnel and 229 data officers.

The Programme is under the supervision and technical

expertise of a Programme Manager assisted by officers in the following key categories: Clinical Care & Support (7), Strategic Information (5), Lab & CDC (5), Finance (5), and Administration including National Service Personnel (15).

As part of the intersectoral collaboration and strengthening, the Programme had technical support from allied institutions such as WHO, the Procurement and Supply Directorate of the Ministry of Health (P&S/MOH), the Stores, Supply and Drug Management of the Ghana Health Service (SSDM/GHS), Noguchi Memorial Institute for Medical Research (NMIMR), Regional Health Directorates, PHRL, USAID, CDC, among others in the implementation of its planned activities.

Fig. 8.1: Organizational Structure of NACP

8.2 VEHICLES

The Programme with approval from Global Fund under the NFM1 budget procured 13 vehicles (Nissan Pickups) to support the national and regional HIV and AIDS-related activities, as well as overall health systems strengthening. This became necessary due to the deplorable state of vehicles in the system. The NACP aspires to replace the aging vehicular fleet to minimize the growing cost of maintenance.

8.3 PROGRAMME MANAGEMENT

8.3.1 STAFF MEETINGS

To strengthen the coordination and implementation of the Programme’s response to HIV and AIDS in the country, four staff meetings were held in the year. In these meetings, unit presentations, as well as individual views

on their performance in the year, were made to ensure that members of staff were abreast with current issues and activities going on within the Programme.

8.3.2 TECHNICAL MEETINGS

The year under review saw the reconstitution of the Technical Working Groups on ART and HIV DR; as well as the formation of a Task Team for rapid implementation of the National Acceleration Plan for Paediatric HIV Services (2016 – 2020) to catalyze the rapid scale-up of child and adolescent HIV services as part of national efforts towards achieving the 90-90-90 aspirational targets by 2020.

The groups mentioned above held their separate meetings in the year and had a Joint Technical Working Group meeting on ART, HIVDR and Paediatric HIV Acceleration at the end of the year to review all aspects of HIV service delivery in the country.

8.3.3 DIRECTOR-GENERAL'S MEETING WITH PUBLIC HEALTH DIVISION

The Programme hosted the meeting of the Director-General (DG), Ghana Health Service, Dr. Anthony Nsiah-Asare with the Public Health Division when he assumed duty as the DG. This was a meeting to familiarize himself with the Division and the Programmes during which he addressed concerns.

The Programme participated actively in all CCM meetings, all the meetings of the Ghana AIDS Commission (GAC), a technical working group meeting of the joint UNAIDS team, weekly meetings of the Public Health Division and the review meeting of the Public Health Division.

8.3.4 REVIEW MEETINGS

The Programme had a national annual review meeting and a midyear review meeting. These meetings served

to strengthen the resolve of the Programme to reach out to all communities with trained professionals to provide dedicated HIV and AIDS services. The meetings also afforded regional teams the opportunity to critically reflect on their performances and strategise for the future. These fora could be described as a peer review mechanism for ensuring a high standard of care.

8.3.5 INTERNATIONAL MEETINGS

The Programme sent delegates to various international meetings and workshops to share and assimilate knowledge. Notable among there were International AIDS Conference, ICASA in Ivory Coast.

9.0 Monitoring and Training

9.1 ART/PMTCT MONITORING VISITS

Monitoring forms a key part of NACP's activities to follow the progress of implementation of the health sector activities of HIV and AIDS. Monitoring and site support visits were undertaken by national and regional officers of the Ghana Health Service.

- Quarter 2 - JUTA Joint Monitoring on WHO Guidelines on PMTCT/EID carried out in collaboration with FHD and NACP to three regions - Ashanti, Greater Accra, and Eastern regions.
- ART/PMTCT Quarter 3 monitoring in all the 10 regions was undertaken from July- August 2017. One hundred and three (103) health facilities were visited by the monitoring teams comprising 2 Teaching Hospitals, 5 Regional Hospitals, 38 District Hospitals including seven Polyclinics and three municipal hospitals, 30 Health Centres, 8 Community-based Health Planning and Services compounds (CHPS), 9 CHAG facilities and 2 Private health facilities.
- As part of activities to improve quality of service delivery in Global Fund Drop-In-Centers(DIC) in the priority regions, the GAC in collaboration with the NACP embarked on an assessment / supportive visit to DICs in 6 priority regions; Ashanti, Brong Ahafo, Great Accra, Central, Eastern, and Volta. A total of 15 DICs were visited.
- ART/PMTCT Q4 monitoring and DOTS site assessment in 6 regions (November 2017) As a follow-up to the ART training, monitoring had to be undertaken to provide supportive supervision and mentorship to the staff who had been trained. The objectives were to improve data capture, quality of care given to clients and logistics management. This was undertaken together with DOTS site assessment for ART provision. NTP and NACP jointly carried out the activities in the spirit of the collaboration. These DOTS sites also provide PMTCT services, so were assessed together with the ART services available. 62 DOTS sites were assessed with 46 qualifying to be upgraded to ART sites.

Two monitoring visits were undertaken to the Western and Northern Regions by the Programme Manager of NACP, the Dep. Director General of the GHS, the US Ambassador to Ghana and the Director of Public Health, GHS. These were in collaboration between the Government of Ghana

and the US Government in the fight against HIV. The purpose of the visits were to observe activities at the ART Clinic and how U.S. Government partnership with the MOH/GHS through the NACP is supporting the provision of care and support for PLHIVs. The team also took the opportunity to interact with Persons Living with HIV. They also visited the Public Health Reference Laboratories of those regions to ascertain the state of the PCR equipment and the challenges associated with Viral Load testing.

9.2 TRAINING ACTIVITIES

9.2.1 PMTCT/EID TRAINING

National AIDS/STI Control Programme (NACP) in collaboration with the Family Health Division (FHD) of the Ghana Health service organized HTS/PMTCT workshops for four hundred and forty-five (445) selected Healthcare providers in the Ashanti, Greater Accra, Upper West and Upper East regions providing Reproductive and Child Health services who have either not had any formal training in PMTCT or had been trained on the job. Global fund sponsored the training of three hundred and fifty-nine (359) healthcare workers while UNICEF sponsored eighty-six (86). A total of one hundred and seventy-Nine (179) new sites were started after the training.

9.2.2 Training of Lay Counselors

GAC collaborated with NACP to train a total of 119 non-healthcare providers in HIV testing and counselling in collaboration with GAC in Ashanti and Greater Accra as well as for NGOs under GAC. Between June and July, 89 participants from Ashanti and Greater Accra were trained from WAPCAS, CEPEHRG, PPAG, TB Voice Network, GAC, MICDAK, NAP+, Stop TB, MAB Hospital, ADRA, MIHOSO, WAAF and Millennium Promise. Then in November, 20 participants were trained for NGOs under GAC and were drawn from Abokobi Presbyterian Women's Hostel HFFG, HOFA, CCG, 4H GHANA, MICDAK.

9.2.3 Training of Healthcare Providers on The Integration PMTCT into MNCH (9th September – 27th October).

The training was carried out in 6 selected districts in the Eastern Region and funded by UNICEF after the development of SOPs for integration in collaboration with the Family Health Division of the Ghana Health Service. In

total, 350 participants were trained in all six (6) districts. Three districts were however trained in September/October by NACP, and they were; Yilo Krobo District, Denkyemba and New Juaben Municipal. In total 170 Health workers from these three districts were taken through the SOPs.

The expected impact of the training is an increase in the number of ART sites, improved TB/HIV care, improved access to ART and PMTCT services and reduction in loss to follow-up of clients.

9.2.4 DOTS ART training in 6 regions (4th to 15th Dec. 2017)

Seventy-eight (78) DOTS sites with 410 health care workers were trained to provide ART in the 6 regions (Upper West, Upper East, Northern, Brong Ahafo, Volta, and Central).

10.0 Challenges

10.1 Funding gap for commodities

Under the terms of the agreement with PEPFAR, the GOG in 2017 was required to show evidence of procurement of commodities valued at \$3.2million after the initial fulfilment of PEPFAR obligation. In the year 2018, the Government is also expected under the same agreement to procure HIV commodities in the amount of \$13.9 million. The procurement of these commodities by GOG is critical to avoid stock-outs and breach of the Memorandum Of Understanding(MOU).

10.2 Weak viral load testing programme

Weak viral load testing programme- This can be attributed to lack of requests from healthcare staff, logistical challenges in transporting samples from requesting health facilities to the regional DNA PCR labs and transmission of the test results. This is usually aggravated by the periodic breakdown of testing platforms.

10.3 Human Resource

Inadequate staff at national, regional and facility levels has resulted in the overburdening of limited staff, thus, affecting the quality of service delivery. This is compounded by high staff turnover which has resulted in capacity gaps at facility levels.

The yearly transfer of service providers both within and outside the facilities created human resource gaps which affected the delivery of services. The situation, unfortunately, is the same.

10.4 Limited Infrastructure

Infrastructure to ensure the effective and efficient provision of HIV services was also limited. Efforts at refurbishing existing warehouses have stalled due to lack of funds. Other warehouses also have limited storage spaces. Unfortunately, there are no funds available in the newly signed New Funding Model 2 (NFM2) for infrastructural refurbishment and expansion.

10.5 Frequent breakdown of laboratory equipment

Frequent breakdown of equipment (chemistry, haematology, DNA PCR and CD4 machine) was a major challenge. This is because many of the machines are obsolete and out of service. There was also no maintenance contract to service some of these equipment.

10.6 Service coverage gap

Very low male testing, low PMTCT coverage rates, high MTCT levels and high lost to follow up were recorded in 2017. There was also a low level of couple HIV testing and counselling.

11.0 Way Forward

11.1 Funding gap for commodities

The MOH/GHS has signed for new Global Fund resources for the years 2018 to 2020 and must ensure that all existing MOUs are executed with full government support to fill the funding gap. Other sources of funding support will be explored. NACP will continue to foster close and strong collaboration with Ghana AIDS Commission and other stakeholders in the mobilization of funds through the AIDS fund.

11.2 Strengthening the Weak viral load testing programme

The viral load scale-up plan has been developed and is being implemented. It is expected to address challenges with sample referral, equipment maintenance, training and capacity building for health care workers, quality assurance and data management.

11.3 Filling the gaps in Human Resource

Dissemination and implementation of the task shifting policy are expected to make more staff available for HIV activities. Implementation of various Differentiated Models of Care will also improve efficiency at service delivery points.

11.4 Addressing the frequent breakdown of laboratory equipment

The Programme will continue efforts towards the implementation of a systematic plan for equipment maintenance and replacement in collaboration with the Health Administration and Support Services Division (HASS)

11.5 Improving Service coverage

Efforts to improve PMTCT through integration with greater involvement of the district public health nurses will continue.

Training of staff at DOTS and PMTCT sites to provide ART is expected to improve access to ART and this will be continued in 2018 at PMTCT sites to further expand coverage.

With the expected scale-up of the last mile delivery implementation, commodity shortage at facility levels are also expected to reduce.

Therefore, the overall performance of the programme is expected to improve.

12.0 Conclusion

The approval of the grant for the NFM2 for 2018 to 2020, will enable the NACP to implement some of the strategies outlined. The programme, in collaboration with Stakeholders, will continue with and complete all other outstanding activities as agreed in the NFM2.
